- FLUIDOTEHNIC's production program is based on its own development. Thanks to that, all the products are the result of the engineering staff work, as well as the quality and skilled workers in manufacturing and installation. Each serial product during the conquest passes through the phase of prototype development, functional tests and check in real operating conditions. Following step is removal of all possible defects and then, based on that, test series is produced. This is how we achieve high quality of manufactured devices. In case of the individual production, after the functional testing, we deliver the product to the customer.
- Since its foundation FLUIDOTEHNIC Ltd. has been continuously investing both in the expansion of commercial building and the purchase of modern equipment for the production, control and techno-economic support. It is located in the industrial zone of Vrnjacka Banja, on a lot size ~ 2ha. It consists several buildings, connected into a functional whole area of 4000 m². The whole complex is adjusted to the environment- we are taking good care of health, work safety and environmental protection.

- Market research, device development, technical assistance and personnel training free of charge for all our customers is the main task of this service. Many years of experience in the development tasks of hydraulics, pneumatics and lubrication techniques, as well as the latest computer technology guarantee that our customers will get the optimum technical solution. During the development, every device passes precisely defined procedure, starting from making the design concept, followed by manufacturing and testing prototypes and going into production.
- It consists of several facilities and departments: foundry of non-ferrous metals, mechanical drive, locksmith department, installation and technical control. All operations from the casting to the final machining are performed with the universal and software machines. Control and assembly is 100%. When the assembly is finished, each device is being tested on the test stand and on the basis of the results it gets the appropriate certificates and guarantees. On each call of the user, service teams come in as soon as possible, with spare parts and the necessary tools, regardless of whether the equipment is in warranty or out of warranty period.

PNEUMATIC PUMP FOR LUBRICATION

Pneumatic pump for lubrication type is applied for centralized lubrication systems and for single lubrication in service work-shops as well as in industrial plants, where the supply of pressurized air is available. It is suitable for operation in very hard working conditions (excavators for surface exploitation, iron plants, cement works). This piston pump is designed to be directly mounted to a standard lubricant barrel of 200 dm³. For uniform work operation of the pump pressurized air must be clean and lubricated. This is one of the warranty conditions. The option with filter regulator-lubricator pneumatic set is also available (code 10-5000/P; 10-5050/P).
